Affiliated to JNTU Gurajada Vizianagaram, India

A CRM APPLICATION FOR AI-ENABLED STUDENT ADMISSIONS & SUPPORT MANAGEMENT SYSTEM

User Story

As an Admission Counselor, I want to efficiently manage student admissions using a Salesforce-based Student Admissions & Support Management System. I want to maintain student records, manage course information, track enrollments, and automate admission workflows through approval processes and flows. I also want AI-powered assistance to generate student application summaries, analyze enrollment risks, and recommend approval decisions using Agentforce AI. Additionally, I require automated email notifications, reports, and dashboards to monitor admission activities and improve decision-making while enhancing the overall admission experience for students.

1. INTRODUCTION

1.1 Project Overview

The project "**AI-Enabled Student Admissions & Support Management System**" focuses on developing a Salesforce-based admission management solution that automates the complete student admission lifecycle. The application manages student information, course details, student enrollments, approvals, notifications, and AI-assisted admission processes. It leverages Salesforce's declarative features, including Flows, Approval Processes, Reports, Dashboards, and Agentforce AI, to improve operational efficiency and provide intelligent decision support.

1.2 Purpose

The purpose of this project is to:

- Automate the student admission process.
- Manage student, course, and enrollment records efficiently.
- Improve data accuracy through validation rules.
- Automate approvals and email notifications.
- Generate reports and dashboards for admission analysis.
- Enhance decision-making using Agentforce AI.
- Improve overall student admission management through automation.

2. IDEATION PHASE

2.1 Problem Statement (Customer Problem Statement Template)

PS	I am (Customer)	I'm trying to	But	Because	Which makes me feel
PS-1	Admission Counselor	Manage student admissions efficiently	Student records are managed manually	Data is scattered across multiple files	Inefficient and time-consuming
PS-2	Admission Manager	Approve student enrollments	Manual approval process is slow	Lack of workflow automation	Delayed decision-making
PS-3	Student	Receive admission updates	Notifications are delayed	No automated communication system	Uninformed and dissatisfied

2.2 Empathy Map Canvas

Target Users

- Admission Counselors
- Admission Managers
- Students
- System Administrators

Empathy Analysis

Aspect	Description
Think & Feel	Need an efficient and reliable admission management system.
Hear	Feedback from students and management regarding admission status.
See	Manual paperwork and repetitive admission tasks.
Say & Do	Enter student information, manage enrollments, and process approvals.
Pain	Manual processes, delayed approvals, duplicate records, and communication delays.
Gain	Automated workflows, AI assistance, accurate data, and improved productivity.

2.3 Brainstorming

Brainstormed Ideas

- Manual admission management
- Excel-based student tracking

- Web-based admission portal
- Salesforce-based admission management system
- AI-enabled admission support system

Selected Idea

Salesforce-based AI-Enabled Student Admissions & Support Management System

3. REQUIREMENT ANALYSIS PHASE

3.1 Customer Journey Map

Journey Stages

- Login
- Access Student Admission Application
- Create Student Record
- Select Course
- Create Student Enrollment
- Submit for Approval
- Receive Approval Notification
- Generate Reports and Dashboards

3.2 Solution Requirements

Functional Requirements

FR No	Requirement
FR-1	User Login
FR-2	Student Record Management
FR-3	Course Management
FR-4	Student Enrollment Management
FR-5	Approval Process Automation
FR-6	Email Notification Automation
FR-7	Reports & Dashboards
FR-8	Agentforce AI Integration

Non-Functional Requirements

NFR-1: Usability

The system should provide an intuitive and user-friendly interface for admission counselors and managers.

Requirements

- Simple Lightning interface
- Easy navigation
- Organized page layouts
- Dynamic Forms

NFR-2: Security

The application should ensure secure access to student information.

Requirements

- User authentication
- Profiles
- Role Hierarchy
- Record-level security

NFR-3: Reliability

The system should consistently maintain accurate student admission records.

Requirements

- Automatic data saving
- Validation Rules
- Approval Processes
- Salesforce Cloud Backup

NFR-4: Performance

The application should efficiently manage admission records and reports.

Requirements

- Fast record processing
- Quick report generation
- Efficient Flow execution

NFR-5: Availability

The application should be accessible anytime through Salesforce Cloud.

Requirements

- 24/7 Availability
- Cloud-based infrastructure
- High system uptime

NFR-6: Scalability

The system should support increasing student admissions and institutional growth.

Requirements

- Support multiple departments
- Large student datasets
- Future AI enhancements

3.3 Data Flow Diagram

User → Salesforce Lightning App → Custom Objects → Validation Rules → Approval Process → Salesforce Flows → Email Alerts → Reports & Dashboards → Agentforce AI

3.4 Technology Stack

Layer	Technology
Frontend	Salesforce Lightning Experience
Database	Salesforce Cloud
Automation	Salesforce Flow Builder
Backend	Salesforce Platform
AI	Agentforce AI
Analytics	Reports & Dashboards

4. PROJECT DESIGN PHASE

4.1 Problem–Solution Fit

The proposed system replaces manual admission management with an automated Salesforce-based solution. It centralizes student, course, and enrollment information while automating validations, approvals, notifications, and reporting. Agentforce AI further enhances the system by assisting admission counselors with intelligent summaries and recommendations.

4.2 Proposed Solution (Functional Requirements)

Parameter	Description
User Authentication	Secure login using Salesforce user credentials.
Student Record Management	Create, update, and manage student information.
Course Management	Maintain course details including fees and capacity.
Student Enrollment	Manage student enrollments and discounts.
Approval Process	Automate approval for high-discount enrollments.

Parameter	Description
Validation Rules	Prevent invalid data entry.
Lightning App	Centralized application for admission management.
Dynamic Forms	Display relevant fields dynamically.
Email Notifications	Automated emails for approvals and updates.
Flow Automation	Automate admission-related business processes.
Reports & Dashboards	Visualize admission performance.
Agentforce AI	Generate summaries, analyze risks, and recommend approval decisions.

4.3 Solution Architecture

Architecture Layers

1. **Presentation Layer** – Salesforce Lightning App
2. **Application Layer** – Salesforce Flows & Approval Process
3. **Data Layer** – Standard and Custom Objects
4. **AI Layer** – Agentforce AI
5. **Analytics Layer** – Reports & Dashboards

The layered architecture provides scalability, security, maintainability, and intelligent automation for the admission management process.

5. PROJECT PLANNING & SCHEDULING

5.1 Project Planning

- Created Salesforce Developer Organization.
- Designed the Student Admission Lightning Application.
- Created standard and custom objects.
- Configured tabs and navigation.
- Added custom fields and relationships.
- Customized page layouts.
- Implemented Dynamic Forms.
- Created Validation Rules.
- Configured Approval Processes.

- Developed Email Templates and Email Alerts.
- Automated workflows using Salesforce Flows.
- Configured Users, Profiles, and Roles.
- Implemented Duplicate and Matching Rules.
- Configured Agentforce AI.
- Developed Reports and Dashboards.
- Performed system testing and verification.

6. PROJECT DEVELOPMENT PHASE

Project Flow

Milestone 1: Lightning App Creation

Milestone 2: Objects Creation

Milestone 3: Tabs Creation

Milestone 4: Fields & Relationships

Milestone 5: Validation Rules

Milestone 6: Approval Process

Milestone 7: Email Templates

Milestone 8: Email Alerts

Milestone 9: Declarative Automation (Flows)

Milestone 10: Agentforce AI Implementation

Milestone 11: Editing of Page Layouts

Milestone 12: Dynamic Forms

Milestone 13: Users

Milestone 14: Duplicate & Matching Rules

Milestone 15: Profiles

Milestone 16: Roles & Role Hierarchy

Milestone 17: Reports & Dashboards

Milestone 18: Conclusion

IMPLEMENTATION

Milestone 1: Salesforce Account

Objective

The objective of this milestone is to establish the Salesforce Developer Edition environment and create a dedicated Lightning Application for the **AI-Enabled Student Admissions & Support Management System**. The Lightning App serves as the primary workspace where admission counselors, managers, and administrators can access student information, course details, enrollments, reports, dashboards, and automation features.

Introduction

Salesforce Developer Edition provides a free cloud-based environment that enables developers and administrators to design, customize, and test Salesforce applications without affecting production data. It supports the creation of custom objects, fields, workflows, approval processes, reports, dashboards, and AI-powered features.

For this project, the Developer Org was used to implement the AI-Enabled Student Admissions & Support Management System using Salesforce's declarative tools without writing Apex code.

Implementation Steps

The following activities were performed during the initial setup of the project:

1. Created a Salesforce Developer Edition account.
2. Verified the registered email address.
3. Logged into the Salesforce Lightning Experience.
4. Accessed the Salesforce Setup page.
5. Opened the App Manager from the Setup menu.

6. Created a new Lightning Application named **AI-Enabled Student Admissions & Support Management System**.
7. Configured the application description and branding.
8. Added the default navigation items including Home, Chatter, Reports, and Dashboards.
9. Assigned the application visibility to the System Administrator profile.
10. Saved and verified the newly created Lightning Application.

Lightning Application Configuration

Property	Configuration
Application Name	AI-Enabled Student Admissions & Support Management System
Platform	Salesforce Lightning Experience
Application Type	Lightning App
Visible Profile	System Administrator
Navigation Items	Home, Chatter, Reports, Dashboards

Description:

The Salesforce Setup page provides the administrative workspace where application configuration, object management, security settings, automation tools, reports, dashboards, and user management are performed.

App Manager

Description:

The App Manager displays all Lightning and Classic applications available in the organization. It allows administrators to create, modify, and manage custom applications.

Lightning App Configuration

Description:

This screen shows the configuration page used to define the application name, description, and developer settings before creating the Lightning Application.

Navigation Item Configuration

Description:

The navigation configuration page displays the standard menu items selected for the application. Additional custom object tabs will be added in subsequent milestones.

Created Lightning Application

Description:

The completed Lightning Application after successful creation. The application serves as the centralized workspace for managing student admissions, enrollments, automation, reports, and dashboards.

The screenshot shows the Salesforce Lightning Experience App Manager interface. The top navigation bar includes the 'Developer Edition' tab, a search bar, and various utility icons. The left sidebar shows the 'Setup' menu with 'App Manager' selected. The main content area displays a list of 32 items, sorted by App Name, filtered by All app menu items, TabSet Type, and App Type. The list includes items like Agentforce Grid, Agentforce Studio, AI-Enabled Student Admissions & Support Management, All Tabs, Analytics Studio, App Launcher, Approvals, Automation, Bolt Solutions, Community, and Content. Each item has columns for App Name, Developer Name, Description, Last Modified, App Type, and Visibility.

	App Name	Developer Name	Description	Last Modified	App Type	Visibility
1	Agentforce Grid	AIWorkbench	Access Agentforce Grid	6/20/2026, 3:59 A...	Lightning	✓
2	Agentforce Studio	AgentforceStudio	Agentforce Studio	6/20/2026, 3:59 A...	Lightning	✓
3	AI-Enabled Student Admissions & Supp...	AIEnabled_Student_Admissions_Supp...		7/1/2026, 6:19 PM	Lightning	✓
4	All Tabs	AllTabSet		6/20/2026, 3:54 A...	Classic	✓
5	Analytics Studio	Insights	Build CRM Analytics dashboards and apps	6/20/2026, 3:54 A...	Classic	✓
6	App Launcher	AppLauncher	App Launcher tabs	6/20/2026, 3:54 A...	Classic	✓
7	Approvals	Approvals	Manage approvals and approval flows	6/20/2026, 3:54 A...	Lightning	✓
8	Automation	FlowsApp	Automate business processes and repetitive tasks.	6/20/2026, 3:58 A...	Lightning	✓
9	Bolt Solutions	LightningBolt	Discover and manage business solutions design...	6/20/2026, 3:54 A...	Lightning	✓
10	Community	Community	Salesforce CRM Communities	6/20/2026, 3:54 A...	Classic	✓
11	Content	Content	Salesforce CRM Content	6/20/2026, 3:54 A...	Classic	✓

Outcome

The Salesforce Developer Organization was successfully configured, and a dedicated Lightning Application was created for the AI-Enabled Student Admissions & Support Management System. This application provides a centralized environment for implementing all remaining project components, including custom objects, automation, security, reports, dashboards, and AI-powered admission management features.

Milestone 2: Objects Creation

Objective

The objective of this milestone is to create the custom objects required for managing course information and student enrollment details in the AI-Enabled Student Admissions & Support Management System. These objects provide the foundation for storing academic information and supporting the complete student admission process.

Introduction

Salesforce stores data using objects, which are similar to tables in a relational database. Standard objects such as Contact and Opportunity are available by default, while custom objects can be created to meet specific business requirements.

In this project, the standard Contact object is used to manage student information, and the Opportunity object is used to manage admission opportunities. Two additional custom objects, Course and Student Enrollment, were created to store course information and enrollment details respectively.

Objects Used in the Project

Object Name	Object Type	Purpose
Contact	Standard Object	Stores student information
Opportunity	Standard Object	Stores admission details
Course	Custom Object	Stores course information
Student Enrollment	Custom Object	Stores enrollment records

Course Object Configuration

Property	Value
Object Label	Course
Plural Label	Courses
Record Name	Course Name
Data Type	Text
Reports	Enabled
Activities	Enabled
Field History Tracking	Enabled

Student Enrollment Object Configuration

Property	Value
Object Label	Student Enrollment
Plural Label	Student Enrollments
Record Name	Enrollment Number

Property	Value
Data Type	Auto Number
Display Format	ENR-{0000}
Starting Number	1
Reports	Enabled
Activities	Enabled
Field History Tracking	Enabled

Implementation Steps

The following activities were completed during this milestone:

1. Opened Salesforce Setup.
2. Navigated to Object Manager.
3. Created the Course custom object.
4. Configured reports, activities, and field history tracking.
5. Created the Student Enrollment custom object.
6. Configured the record name as an Auto Number.
7. Enabled reporting and activity tracking for the object.
8. Verified both objects in Object Manager.

Object Manager

 Developer Edition Search Setup Setup Home Object Manager					
 Object Manager 108+ Items, Sorted by Label Quick Find Schema Builder Create					
LABEL	API NAME	TYPE	DESCRIPTION	LAST MODIFIED	DEPLOYED
Account	Account	Standard Object			
Activity	Activity	Standard Object			
Activity History	DevopsActivityLog	Standard Object			
Address	Address	Standard Object			
Agent Work	AgentWork	Standard Object			
Alternative Payment Method	AlternativePaymentMethod	Standard Object			
API Anomaly Event Store	ApiAnomalyEventStore	Standard Object			
Appointment Category	AppointmentCategory	Standard Object			
Appointment Invitation	AppointmentInvitation	Standard Object			
Appointment Invitee	AppointmentInvitee	Standard Object			
Appointment Topic Time Slot	AppointmentTopicTimeSlot	Standard Object			
Approval Submission	ApprovalSubmission	Standard Object			

Description

The Object Manager provides access to all standard and custom objects available in the Salesforce organization. It is used to create and manage the data model of the application.

Course Object Configuration

The screenshot shows the 'New Custom Object' configuration page in Salesforce. The page title is 'New Custom Object'. Below the title, there is a message: 'Permissions for this object are disabled for all profiles by default. You can enable object permissions in permission sets or by editing custom profiles. [Tell me more!](#) [Don't show this message again](#)'. The main section is 'Custom Object Definition Edit' with buttons for 'Save', 'Save & New', and 'Cancel'. Under 'Custom Object Information', there are fields for 'Label' (Course), 'Plural Label' (Courses), 'Object Name' (Course), and 'Description'. There are also checkboxes for 'Starts with vowel sound' and 'Context Sensitive Help Setting'. A 'Required Information' icon is visible on the right side of the form.

Description

This screenshot shows the configuration details of the Course custom object, including its object label, record name, and enabled features such as reports, activities, and field history tracking.

Course Object Details

Description

The Course object was successfully created and is now available in the Salesforce organization for storing course-related information.

Student Enrollment Object Configuration

The screenshot shows the 'New Custom Object' configuration page in Salesforce for the 'Student Enrollment' object. The page title is 'New Custom Object'. Below the title, there is a message: 'Permissions for this object are disabled for all profiles by default. You can enable object permissions in permission sets or by editing custom profiles. [Tell me more!](#) [Don't show this message again](#)'. The main section is 'Custom Object Definition Edit' with buttons for 'Save', 'Save & New', and 'Cancel'. Under 'Custom Object Information', there are fields for 'Label' (Student Enrollment), 'Plural Label' (Student Enrollments), 'Object Name' (Student_Enrollment), and 'Description'. There are also checkboxes for 'Starts with vowel sound' and 'Context Sensitive Help Setting'. A 'Required Information' icon is visible on the right side of the form.

Description

This screenshot displays the configuration of the Student Enrollment custom object with the Auto Number record name format and enabled reporting features.

Object Manager after Object Creation

Description

The Object Manager displaying both newly created custom objects, Course and Student Enrollment, confirming their successful creation.

Outcome

The required custom objects were successfully created in Salesforce. These objects establish the core data model for the AI-Enabled Student Admissions & Support Management System and will be used in subsequent milestones to create fields, relationships, automation, and security configurations.

Milestone 3 – Tabs

Objective

The objective of this milestone is to create custom tabs for the custom objects developed in the previous milestone. Tabs provide users with easy navigation and quick access to records stored within custom objects through the Lightning Application.

Introduction

Salesforce Tabs provide a user-friendly interface to access object records. Creating tabs for custom objects ensures that users can easily create, view, edit, and manage records directly from the Lightning Application. In this project, tabs were created for the Course and Student Enrollment objects to improve usability and navigation.

Tabs Created

Tab Name	Object
Course	Course
Student Enrollment	Student Enrollment

Implementation Steps

1. Navigated to the Tabs configuration page in Salesforce Setup.
2. Created a custom tab for the Course object.
3. Selected an appropriate tab style.
4. Enabled tab visibility for the System Administrator profile.
5. Added the tab to the AI-Enabled Student Admissions & Support Management System Lightning App.
6. Repeated the same process for the Student Enrollment object.
7. Verified that both tabs were successfully displayed in the Lightning Application.

Custom Tabs Configuration

The screenshot shows the Salesforce Setup interface for Custom Tabs. The left sidebar includes a search bar with 'tabs' and a 'User Interface' section with 'Rename Tabs and Labels' and 'Tabs' links. The main content area is titled 'Custom Tabs' and includes a 'Help for this Page' link. Below the title, there is a section for 'Custom Object Tabs' with a table listing tabs for 'Courses' and 'Students'. The 'Courses' tab is highlighted with a purple 'Books' style, and the 'Students' tab is highlighted with an orange 'People' style. Below this, there are sections for 'Web Tabs' and 'Visualforce Tabs', both indicating that no tabs have been defined.

Action	Label	Tab Style	Description
Edit Del	Courses	Books	
Edit Del	Students	People	

Description:

The custom tabs for the Course and Student Enrollment objects were successfully created and configured, allowing users to access these objects directly from the Lightning Application.

Lightning Application Navigation

This screenshot shows the same Salesforce Setup interface for Custom Tabs, but with updated configurations. The 'Custom Object Tabs' table now includes three entries: 'Courses' with a purple 'Books' style, 'Student Enrollments' with a blue 'Chalkboard' style, and 'Students' with an orange 'People' style. The 'Web Tabs' and 'Visualforce Tabs' sections remain empty, indicating no tabs have been defined for those types.

Action	Label	Tab Style	Description
Edit Del	Courses	Books	
Edit Del	Student Enrollments	Chalkboard	
Edit Del	Students	People	

Description:

The Lightning Application displaying the newly created Course and Student Enrollment tabs, providing centralized access to all admission management components.

Outcome

The custom tabs for the Course and Student Enrollment objects were successfully created and integrated into the Lightning Application. These tabs enhance user navigation and provide direct access to the application's core data objects.

Milestone 4: Fields & Relationships

Objective

The objective of this milestone is to extend the standard Contact object with custom fields required to manage student information effectively. These fields enable the system to uniquely identify students, record their educational qualifications, and monitor their admission status throughout the enrollment process.

Introduction

The Contact object is used as the primary object for storing student information in the AI-Enabled Student Admissions & Support Management System. Additional custom fields were created to capture student-specific details that are not available in the standard Salesforce Contact object.

Course__c

The **Course__c** object is a custom object developed to maintain information about the courses offered by the institution. It stores course-related details such as course code, category, fee, duration, status, and capacity. This object acts as the master record for all available courses and is linked to student enrollment records.

Fields in Course__c

Field 1: Course Code

- **Data Type:** Text
- **Field Label:** Course Code
- **Field Name:** Auto Populates
- **Required:** Check the box
- **Click:** Next → Next → Save & New

Field 2: Course Category

- **Data Type:** Picklist
- **Field Label:** Course Category
- **Field Name:** Auto Populates
- **Values:** Technical, Non-Technical
- **Required:** Check the box
- **Click:** Next → Next → Save & New

Field 3: Course Fee

- **Data Type:** Currency
- **Field Label:** Course Fee
- **Field Name:** Auto Populates
- **Required:** Check the box
- **Click:** Next → Next → Save & New

Field 4: Course Duration

- **Data Type:** Number
- **Field Label:** Course Duration
- **Field Name:** Auto Populates
- **Required:** Check the box
- **Click:** Next → Next → Save & New

Field 5: Course Status

- **Data Type:** Picklist
- **Field Label:** Course Status
- **Field Name:** Auto Populates
- **Values:** Active, Inactive

- **Required:** Check the box
- **Click:** Next → Next → Save & New

Field 6: Capacity

- **Data Type:** Number
- **Field Label:** Capacity
- **Field Name:** Auto Populates
- **Required:** Check the box
- **Click:** Next → Next → Save

FIELD LABEL	FIELD NAME	DATA TYPE	CONTROLLING FIELD	INDEXED
Capacity	Capacity__c	Number(3, 0)

Course Code	Course_Code__c	Text(20)		
Course Duration	Course_Duration__c	Number(3, 0)		
Course Fee	Course_Fee__c	Currency(16, 2)		
Course Name	Name	Text(80)		✓
Course Status	Course_Status__c	Picklist		

Student_Enrollment__c

The **Student_Enrollment__c** object is a custom object used to manage student enrollment details. It establishes the relationship between students and courses while tracking enrollment status, approvals, payments, discounts, and the final payable amount. This object serves as the central component of the Student Admission Management System.

Fields in Student_Enrollment__c

Field 1: Student

- **Data Type:** Master-Detail Relationship (Contact)
- **Field Label:** Student
- **Field Name:** Auto Populates
- **Related To:** Contact
- **Required:** Yes (Automatically)
- **Click:** Next → Next → Save & New

Field 2: Course

- **Data Type:** Master-Detail Relationship (Course__c)
- **Field Label:** Course
- **Field Name:** Auto Populates
- **Related To:** Course__c
- **Required:** Yes (Automatically)
- **Click:** Next → Next → Save & New

Field 3: Enrollment Date

- **Data Type:** Date
- **Field Label:** Enrollment Date
- **Field Name:** Auto Populates
- **Required:** Check the box
- **Click:** Next → Next → Save & New

Field 4: Discount Percentage

- **Data Type:** Percent
- **Field Label:** Discount Percentage
- **Field Name:** Auto Populates
- **Required:** Leave Unchecked
- **Click:** Next → Next → Save & New

Field 5: Final Payable Amount

- **Data Type:** Formula (Currency)
- **Field Label:** Final Payable Amount
- **Field Name:** Auto Populates
- **Formula:** $\text{Course_r.Course_Fee_c} * (1 - (\text{Discount_c} / 100))$
- **Click:** Check Syntax → Next → Next → Save & New

Field 6: Enrollment Status

- **Data Type:** Picklist
- **Field Label:** Enrollment Status
- **Field Name:** Auto Populates
- **Values:** Draft, Pending Approval, Approved
- **Required:** Check the box

- **Click:** Next → Next → Save & New

Field 7: Approval Status

- **Data Type:** Picklist
- **Field Label:** Approval Status
- **Field Name:** Auto Populates
- **Values:** Pending, Approved, Rejected
- **Required:** Check the box
- **Click:** Next → Next → Save & New

Field 8: Payment Status

- **Data Type:** Picklist
- **Field Label:** Payment Status
- **Field Name:** Auto Populates
- **Values:** Paid, Pending
- **Required:** Check the box
- **Click:** Next → Next → Save

Opportunity

The **Opportunity** object is used to manage the student admission process. Each opportunity represents an admission application and tracks its progress, counselor assignment, payment details, and expected course start date.

Fields in Opportunity

Field 1: Admission Stage

- **Data Type:** Picklist
- **Field Label:** Admission Stage
- **Field Name:** Auto Populates
- **Values:** Inquiry, Application Submitted, Under Review, Approved, Rejected
- **Required:** Check the box
- **Click:** Next → Next → Save & New

Field 2: Expected Start Date

- **Data Type:** Date
- **Field Label:** Expected Start Date
- **Field Name:** Auto Populates
- **Required:** Check the box
- **Click:** Next → Next → Save & New

Field 3: Payment Status

- **Data Type:** Picklist
- **Field Label:** Payment Status
- **Field Name:** Auto Populates
- **Values:** Pending, Paid
- **Required:** Check the box
- **Click:** Next → Next → Save & New

Field 4: Counselor Assigned

- **Data Type:** Lookup (User)
- **Field Label:** Counselor Assigned
- **Field Name:** Auto Populates
- **Related To:** User
- **Required:** Leave Unchecked
- **Click:** Next → Next → Save & New

Field 5: Total Course Fee

- **Data Type:** Currency
- **Field Label:** Total Course Fee
- **Field Name:** Auto Populates

- **Required:** Check the box
- **Click:** Next → Next → Save

Implementation Steps

1. Opened the Contact object from Object Manager.
2. Navigated to the Fields & Relationships section.
3. Created the fields using the given data type.
4. Saved the fields and verified their successful creation.

Outcome

The Contact object was successfully customized with the required student-related fields. These fields provide a structured way to identify students, record educational qualifications, and monitor their admission status within the application.

Milestone 5 – Validation Rules

Objective

The objective of this milestone is to implement validation rules that ensure only valid and complete data is entered into the AI-Enabled Student Admissions & Support Management System. Validation rules improve data quality by preventing users from saving incorrect or incomplete records.

Introduction

Validation Rules are declarative Salesforce features used to enforce business rules during record creation and updates. When a validation rule evaluates to TRUE, Salesforce prevents the record from being saved and displays an error message to the user. In this project, validation rules were implemented to maintain accurate student admission and enrollment information.

Validation Rules

Validation Rules are used in Salesforce to maintain data integrity by preventing users from saving records that do not satisfy specific business requirements. In this project, validation rules were implemented on the **Course__c**, **Opportunity**, and **Student_Enrollment__c** objects to ensure accurate and consistent data entry.

Activity 1: Create a Validation Rule on Course__c Object

Validation Rule Name : Course_Capacity_Validation

Object : Course__c

Objective

To ensure that the course capacity entered is greater than zero. This prevents users from creating courses with invalid or zero capacity.

Formula: Capacity__c <= 0

Error Message: Course Capacity must be greater than zero.

Error Location

Field: Capacity

Outcome

When a user enters a value less than or equal to zero for the course capacity, Salesforce displays an error message and prevents the record from being saved.

The screenshot shows the Salesforce Setup interface for the 'Course' object. The 'Course Validation Rule' is active and has the following details:

Validation Rule Detail		Active
Rule Name	Course_Fee_Validation	✓
Error Condition Formula	Course_Fee__c <= 0	
Error Message	Course Fee must be greater than zero	Error Location: Top of Page
Description		
Created By	NADUPURU KUSUMA	Modified By: NADUPURU KUSUMA
	6/29/2026, 9:09 PM	6/29/2026, 9:09 PM

Activity 2: Create a Validation Rule on Opportunity Object

Validation Rule Name

Expected_Start_Date_Validation

Object: Opportunity

Objective : To prevent users from selecting an expected course start date that is earlier than the current date.

Formula: Expected_Start_Date__c < TODAY()

Error Message: Expected Start Date cannot be in the past.

Field: Expected Start Date

Outcome

If a past date is entered as the expected start date, Salesforce displays an error message and blocks the record from being saved until a valid future date is selected.

Activity 3: Create a Validation Rule on Student_Enrollment__c Object

Validation Rule Name

Discount_Percentage_Validation

Object: Student_Enrollment__c

Objective: To ensure that the discount percentage entered for a student enrollment remains within the valid range of 0% to 100%.

Formula : $OR(Discount_c < 0, Discount_c > 100)$

Error Message: Discount Percentage must be between 0 and 100.

Error Location

Field: Discount Percentage

Outcome

If the user enters a discount value below 0% or above 100%, Salesforce prevents the record from being saved and displays the appropriate validation message. This ensures that only valid discount percentages are applied during the enrollment process.

Implementation Steps

1. Opened the required object in Object Manager.
2. Navigated to the Validation Rules section.
3. Created a validation rule using a formula expression.

4. Specified an appropriate error message and error location.
5. Saved and activated the validation rule.
6. Tested the validation rule by creating sample records with invalid values.

Outcome

The validation rules implemented in this project improve data quality by enforcing business constraints at the time of record creation or update. They help prevent invalid course capacities, incorrect admission dates, and unrealistic discount percentages, thereby ensuring reliable and consistent data across the Student Admission Management System.

Milestone 6 – Approval Process

Objective

The objective of this milestone is to implement an **Approval Process** for high-discount student enrollments in the AI-Enabled Student Admissions & Support Management System. This approval workflow ensures that student enrollments with discounts beyond the allowed limit are reviewed and approved by the Admission Manager before the enrollment is finalized.

Introduction

An **Approval Process** in Salesforce automates the review and approval of business records based on predefined conditions. It routes records to designated approvers, locks records during review, and performs actions upon approval or rejection.

In this project, an approval process was created on the **Student Enrollment** object to manage enrollments that receive high discounts. Whenever the discount percentage exceeds the specified limit, the enrollment record is automatically submitted to the Admission Manager for approval.

Approval Process Details

Property	Value
Approval Process Name	High Discount Student Enrollment Approval
Object	Student Enrollment
Entry Criteria	Discount Percentage > 20%
Approver	Admission Manager
Initial Submission Action	Lock Record
Final Approval Action	Update Approval Status to Approved
Final Rejection Action	Update Approval Status to Rejected
Record Unlock	Enabled after Approval/Rejection
Status	Active

Approval Workflow

Stage	Description
Record Submission	Student Enrollment record is submitted for approval.
Entry Criteria Check	Salesforce verifies whether the discount percentage is greater than 20%.
Approval Request	Approval request is sent to the Admission Manager.
Manager Review	The Admission Manager reviews the enrollment details.
Approval	Approval Status is updated to Approved .
Rejection	Approval Status is updated to Rejected .

Implementation Steps

The following activities were completed during this milestone:

1. Opened Salesforce Setup.
2. Navigated to Approval Processes.
3. Selected the Student Enrollment object.
4. Created a new Approval Process using the Standard Setup Wizard.
5. Configured the approval process details.
6. Defined the entry criteria based on the Discount Percentage field.
7. Assigned the Admission Manager as the approver.
8. Configured the Initial Submission Actions.
9. Configured the Final Approval Actions.
10. Configured the Final Rejection Actions.
11. Saved the Approval Process.
12. Activated the Approval Process.
13. Verified the approval workflow by submitting a Student Enrollment record for approval.

Outcome

The Approval Process was successfully implemented on the **Student Enrollment** object. Student enrollments with discounts exceeding the defined threshold are automatically routed to the **Admission Manager** for approval. The workflow locks records during the approval cycle, updates the approval status based on the manager's decision, and ensures that high-discount enrollments are processed in a controlled and transparent manner. This automation improves data integrity, enforces organizational policies, and reduces manual effort in the student admission process.

Milestone 7 – Email Templates

Objective

The objective of this milestone is to create reusable **Email Templates** for the AI-Enabled Student Admissions & Support Management System. These templates automate communication with students and admission counselors by sending standardized email notifications during different stages of the admission process.

Introduction

Email Templates in Salesforce provide a standardized way to send emails with dynamic data. They reduce manual effort, maintain consistency in communication, and improve the efficiency of the admission process. Templates can be used in workflows, flows, approval processes, and other automation tools to notify students and staff automatically.

In this project, email templates were created to inform students and counselors about application submission, approval status, payment confirmation, and enrollment updates.

Subject High-Priority Student Application Assigned to You

Plain Text Preview

Hello {!Student_Enrollment__c.OwnerFullName},

A student application has been identified as high priority by AI and requires immediate attention.

Student Application Details:

Student Name: {!Student_Enrollment__c.Student__r.Name}

Course Applied: {!Student_Enrollment__c.Course__r.Name}

AI Priority Score: {!Student_Enrollment__c.AI_Priority_Score__c}

Outcome

The required email templates were successfully created in Salesforce. These templates provide consistent and automated communication throughout the student admission process. They reduce manual effort, improve response time, ensure professional communication with students and counselors, and seamlessly integrate with Salesforce Flows and Approval Processes to automate notifications.

Milestone 8 – Email Alerts

Objective

The objective of this milestone is to create **Email Alerts** in the AI-Enabled Student Admissions & Support Management System. Email Alerts automate the process of sending notifications to students, admission counselors, and managers based on different events such as enrollment approval, rejection, payment confirmation, and high-priority applications.

Introduction

Email Alerts are a Salesforce automation feature that sends predefined email templates to selected recipients when specific conditions are met. They eliminate manual communication, improve response time, and ensure that stakeholders receive timely updates throughout the admission process.

In this project, Email Alerts were configured to work with Flows and Approval Processes to automatically notify students and counselors whenever important actions occur.

Email Alerts Created

Email Alert Name	Related Object	Email Template	Recipient
Student Admission Confirmation	Student Enrollment	Student Admission Confirmation	Student
Enrollment Approval Alert	Student Enrollment	Enrollment Approval Notification	Student
Enrollment Rejection Alert	Student Enrollment	Enrollment Rejection Notification	Student
Payment Confirmation Alert	Student Enrollment	Payment Confirmation	Student
Counselor Notification Alert	Student Enrollment	Counselor Notification	Admission Counselor

Email Alert Configuration

Property	Value
Object	Student Enrollment
Email Template	Selected Lightning Email Template
Recipient Type	Email Field / User / Related Contact
Sender	Current User / Organization-Wide Email Address
Status	Active

Implementation Steps

The following activities were completed during this milestone:

1. Opened Salesforce Setup.
2. Searched for Email Alerts in the Quick Find box.
3. Clicked New Email Alert.
4. Selected the Student Enrollment object.
5. Entered the Email Alert Name.
6. Selected the appropriate Lightning Email Template.
7. Chose the required recipients (Student, Admission Counselor, or Manager).
8. Saved the Email Alert.
9. Repeated the process to create all required Email Alerts.
10. Linked the Email Alerts to the corresponding Flows and Approval Processes.
11. Tested the Email Alerts to verify that notifications were sent successfully.

Outcome

The Email Alerts were successfully created and integrated with Salesforce automation. Notifications are now sent automatically to students, admission counselors, and managers whenever predefined events occur. This automation improves communication, reduces manual effort, ensures timely updates, and enhances the overall efficiency of the Student Admissions & Support Management System.

Milestone 9 – Declarative Automation (Flows)

Objective

The objective of this milestone is to automate the student admission and enrollment process using Salesforce Flow Builder. Declarative automation eliminates repetitive manual tasks by automatically performing actions based on predefined business rules, thereby improving efficiency, accuracy, and consistency within the AI-Enabled Student Admissions & Support Management System.

Introduction

Salesforce Flow Builder is a powerful declarative automation tool that enables administrators to automate business processes without writing Apex code. Record-Triggered Flows execute automatically whenever a record is created or updated and can perform various operations such as updating records, sending email notifications, creating tasks, and invoking approval processes.

In this project, Record-Triggered Flows were developed to automate important admission activities, including notifying admission counselors about high-priority student applications and updating enrollment records based on changes in approval and payment status.

Flows Implemented

The following flows were created during this milestone:

Flow Name	Purpose
High Priority Student Application Notification	Automatically notifies the assigned Admission Counselor when the AI Priority Score is greater than or equal to 80.
Student Enrollment Status Update	Automatically updates enrollment-related information whenever the Student Enrollment record is modified.
Approval Status Notification	Sends notification emails after the enrollment record is approved or rejected.

 **SETUP**

Implementation Steps

The following activities were completed during this milestone:

1. Opened Salesforce Setup.
2. Navigated to Flow Builder.
3. Clicked New Flow.
4. Selected Record-Triggered Flow.
5. Chose the Student Enrollment object as the trigger object.
6. Configured the flow to execute when a record is created or updated.
7. Defined the entry conditions based on the required business requirements.
8. Added Decision elements to evaluate the record conditions.
9. Configured Update Records elements to update enrollment details automatically.
10. Added Email Alert actions to notify students and admission counselors.
11. Saved the flow with an appropriate label and API name.
12. Activated the flow.
13. Tested the automation using sample Student Enrollment records.
14. Verified that the flow executed successfully and performed the expected actions.

Outcome

The declarative automation was successfully implemented using Salesforce Flow Builder. The developed flows automatically execute business processes whenever Student Enrollment records are created or updated. The automation notifies counselors about high-priority applications, updates enrollment information, and sends email notifications without manual intervention. As a result, the admission process became more efficient, data consistency was improved, response time was reduced, and the overall workflow of the Student Admissions & Support Management System was streamlined.

Milestone 10 – Agentforce AI

Objective

The objective of this milestone is to implement **Salesforce Agentforce AI** in the AI-Enabled Student Admissions & Support Management System. Agentforce AI assists admission counselors by analyzing student enrollment records, generating application summaries, assessing enrollment risks, and recommending approval decisions based on the available student data.

Introduction

Salesforce **Agentforce AI** is an intelligent AI-powered platform that enables organizations to automate complex business processes using conversational AI and prompt-driven actions. It integrates seamlessly with Salesforce data and provides users with contextual recommendations, summaries, and intelligent insights without requiring custom code.

In this project, Agentforce AI was configured to support the student admission process by providing counselors with AI-generated summaries, enrollment risk analysis, and approval recommendations. This reduces manual effort, improves decision-making, and enhances the overall efficiency of the admission workflow.

Agent Configuration

The following Agentforce AI components were configured during this milestone:

Component	Description
AI Agent	Admission Support Agent
Primary Object	Student Enrollment
User Role	Admission Manager and Admission Counselor
Prompt Templates	Generate Student Application Summary, Analyze Enrollment Risk, Recommend Approval Decision
AI Actions	Generate Summary, Risk Analysis, Approval Recommendation

Implementation Steps

The following activities were completed during this milestone:

1. Opened Salesforce Setup.
2. Navigated to Agentforce.

3. Created a new AI Agent for the Student Admissions & Support Management System.
4. Configured the Agent Name and Description.
5. Assigned the appropriate user roles and permissions.
6. Connected the agent to the Student Enrollment object.
7. Created Prompt Templates for AI-generated responses.
8. Added AI Actions to perform admission-related tasks.
9. Configured the agent to use Salesforce data for generating intelligent responses.
10. Saved the Agent configuration.
11. Activated the AI Agent.
12. Tested the agent using sample Student Enrollment records.
13. Verified that the agent successfully generated summaries, analyzed enrollment risks, and recommended approval decisions.

Features Implemented

During the implementation of Agentforce AI, the following intelligent features were developed:

- Automatic generation of student application summaries.
- AI-based enrollment risk analysis.
- Intelligent approval recommendations for admission managers.
- Context-aware responses using Salesforce data.
- Support for admission counselors in reviewing student applications.
- Integration with Salesforce Flows and Approval Processes.

Outcome

The Agentforce AI implementation was successfully completed and integrated with the Student Admissions & Support Management System. The AI agent assists admission counselors by automatically generating student application summaries, analyzing enrollment risks, and providing approval recommendations based on available data. The implementation reduced manual effort, improved the speed and accuracy of admission decisions, enhanced productivity, and demonstrated the practical use of Salesforce's generative AI capabilities within an educational admission management system.

Milestone 11 – Lightning App

Objective

The objective of this milestone is to create a custom **Lightning App** for the AI-Enabled Student Admissions & Support Management System. The Lightning App provides a centralized workspace for admission counselors and managers to access student records, course details, enrollment information, reports, dashboards, and AI-powered features from a single interface.

Introduction

A **Lightning App** in Salesforce is a collection of tabs, objects, utilities, and navigation items designed to support specific business processes. It provides users with an organized and user-friendly interface, allowing them to efficiently access all the resources required for their daily tasks.

In this project, a custom Lightning App named **Student Admission** was created to manage the complete student admission lifecycle. The app integrates standard objects, custom objects, reports, dashboards, and AI features into a single workspace, improving productivity and simplifying navigation.

Lightning App Configuration

Property	Value
App Name	Student Admission
App Type	Lightning App
Navigation Style	Standard Navigation
Assigned Profiles	System Administrator, Admission Manager, Admission Counselor
Utility Bar	Enabled
Status	Active

Navigation Items

The following navigation items were added to the Lightning App:

- Home
- Contact (Students)

- Opportunity (Admissions)
- Course
- Student Enrollment
- Reports
- Dashboards

33 items • Sorted by App Name • Filtered by All app menu items - TabSet Type, App Type

Implementation Steps

The following activities were completed during this milestone:

1. Opened Salesforce Setup.
2. Navigated to App Manager.
3. Clicked New Lightning App.
4. Entered the App Name as Student Admission.
5. Configured the app branding and navigation style.
6. Added the required navigation items, including Contact, Opportunity, Course, Student Enrollment, Reports, and Dashboards.
7. Assigned the application to the required user profiles.
8. Configured the Utility Bar.
9. Saved the Lightning App.
10. Activated the application.
11. Verified that all required objects and navigation tabs were accessible from the application.

Outcome

The Student Admission Lightning App was successfully created and configured in Salesforce. The application provides a centralized and organized interface for managing student admissions, course information, and enrollment records. It enables admission counselors and managers to efficiently access standard and custom objects, reports, dashboards, and automation features from a single workspace. The Lightning App enhances usability, improves navigation, and supports the overall functionality of the AI-Enabled Student Admissions & Support Management System.

Milestone 12 – Editing of Page Layouts

Objective

The objective of this milestone is to customize the page layouts of standard and custom objects in the AI-Enabled Student Admissions & Support Management System. Page layout customization ensures that users can easily view, create, and update records by displaying only the relevant fields and related information required for the admission process.

Introduction

A **Page Layout** in Salesforce controls how fields, related lists, buttons, and other record details are displayed to users. By customizing page layouts, organizations can improve user experience, simplify data entry, and ensure that important information is easily accessible.

In this project, the page layouts of the **Contact**, **Opportunity**, **Course**, and **Student Enrollment** objects were customized to organize fields logically and support the admission workflow.

The screenshot displays the Salesforce Page Layout Editor for the 'Contact' object. The left sidebar shows the navigation menu with 'Page Layouts' selected. The main area is titled 'Contact Layout' and includes a 'Quick Find' search bar. Below the search bar, a table lists available fields for the layout, including 'Section', 'Blank Space', 'Account Name', 'Buyer Attributes', 'Assistant', 'Clean Status', 'Data.com Key', 'Education Level', 'Fax Opt Out', 'Languages', 'Lead Source', 'Name', and 'Pronouns'. The 'Contact Sample' section shows a 'Highlights Panel' with a placeholder for customization. Below this, the 'Quick Actions in the Salesforce Classic Publisher' section lists actions like 'Post', 'File', 'New Task', 'Log a Call', 'New Case', 'New Note', 'New Event', 'Link', 'Poll', 'Question', and 'Email'. The 'Salesforce Mobile and Lightning Experience Actions' section is also visible at the bottom.

Objects Customized

The following objects were customized during this milestone:

Object	Customization
Contact	Added custom student information fields to the page layout.
Opportunity	Added admission-related fields such as Admission Stage, Payment Status, Expected Start Date, Counselor Assigned, and Total Course Fee.
Course	Added course-specific fields including Course Code, Category, Fee, Duration, Status, and Capacity.
Student Enrollment	Added enrollment details such as Student, Course, Enrollment Date, Discount Percentage, Approval Status, Payment Status, and Final Payable Amount.

Implementation Steps

The following activities were completed during this milestone:

1. Opened Salesforce Setup.
2. Navigated to Object Manager.
3. Selected the required object.
4. Opened the Page Layouts section.
5. Selected the default page layout for editing.
6. Dragged and dropped the required custom fields onto the page layout.

7. Arranged the fields into appropriate sections for better readability.
8. Added the required related lists to the page layout.
9. Saved the page layout.
10. Repeated the same process for all standard and custom objects.
11. Verified that the customized layouts displayed correctly in the Lightning App.

Outcome

The page layouts were successfully customized for the **Contact**, **Opportunity**, **Course**, and **Student Enrollment** objects. The customized layouts provide a structured and user-friendly interface by displaying relevant fields in an organized manner. This improves data entry efficiency, simplifies record management, enhances user productivity, and supports the overall admission workflow within the AI-Enabled Student Admissions & Support Management System.

Milestone 13 - Dynamic Forms

Objective

The objective of this milestone is to implement **Dynamic Forms** to create a more flexible and user-friendly record page by displaying fields and sections dynamically based on business requirements. Dynamic Forms improve usability by showing only the information relevant to the user.

Introduction

Dynamic Forms is a Salesforce Lightning feature that enables administrators to place individual fields and sections directly on Lightning Record Pages without relying solely on traditional page layouts. Visibility rules can be applied to fields and sections so that information is displayed only when specific conditions are met.

In this project, Dynamic Forms were implemented to improve the Student Enrollment record page by organizing information into logical sections and displaying relevant fields based on the record data.

Dynamic Form Configuration

Component	Configuration
Record Page	Student Enrollment Record Page
Feature Used	Dynamic Forms
Sections Created	Student Information, Course Details, Enrollment Information, Approval Details, Payment Information
Visibility Rules	Configured based on field values where applicable
Status	Active

Implementation Steps

The following activities were completed during this milestone:

1. Opened Salesforce Setup.
2. Navigated to Object Manager.
3. Selected the Student Enrollment object.
4. Opened the Lightning Record Page.
5. Clicked Edit Page to launch Lightning App Builder.
6. Upgraded the page layout to Dynamic Forms.
7. Added Field Sections to organize related information.
8. Dragged individual fields into their respective sections.
9. Configured field visibility rules where required.

10. Saved the Lightning Record Page.
11. Activated the page for the required application and user profiles.
12. Verified that the Dynamic Form displayed fields correctly based on the configured layout.

Outcome

Dynamic Forms were successfully implemented for the Student Enrollment object. The record page was organized into logical sections, making it easier for users to access and update information. The implementation improved the user experience, reduced page clutter, simplified navigation, and enhanced the efficiency of the student admission process by presenting only relevant information on the Lightning Record Page.

Milestone 14 – Users

Objective

The objective of this milestone is to create and manage Salesforce users for the AI-Enabled Student Admissions & Support Management System. User management ensures that authorized personnel can securely access the application based on their assigned roles and responsibilities.

Introduction

Users in Salesforce represent individuals who access the system to perform specific business operations. Each user is assigned a profile, role, and login credentials that determine the level of access and permissions available within the organization.

In this project, users were created for the Admission Manager and Admission Counselor to support the student admission process. Appropriate profiles and roles were assigned to ensure secure access to records, reports, dashboards, and AI-powered features.

Users Created

User Name	Role	Profile	Purpose
Admission Manager	Admission Manager	System Administrator / Custom Profile	Reviews and approves student enrollments, manages admission activities, and monitors reports.
Admission Counselor	Admission Counselor	Standard User / Custom Profile	Manages student applications, course enrollments, and communicates with students throughout the admission process.

User Configuration

Property	Value
User License	Salesforce
Profile	System Administrator / Standard User
Role	Admission Manager / Admission Counselor

☐ Edit	User_Security	sec	enightssecurity@00df00000snfebeab.com		✓	Analytics Cloud Security User

Outcome

The required Salesforce users were successfully created and configured for the AI-Enabled Student Admissions & Support Management System. Appropriate profiles and roles were assigned to ensure secure and role-based access to the application. The implemented user management supports efficient collaboration between Admission Managers and Admission Counselors while maintaining data security and controlled access to system resources.

Milestone 15 - Duplicate and Matching Rules

Objective

The objective of this milestone is to implement **Duplicate Rules** and **Matching Rules** in Salesforce to prevent the creation of duplicate student records and maintain data quality within the AI-Enabled Student Admissions & Support Management System.

Introduction

Duplicate records can lead to inconsistent data, inaccurate reports, and inefficient business processes. Salesforce provides **Matching Rules** to identify potential duplicate records based on selected fields and **Duplicate Rules** to define the actions that should be taken when duplicates are detected.

In this project, Matching Rules and Duplicate Rules were configured on the **Contact** object to ensure that each student is registered only once in the system. This helps maintain accurate student information and improves the overall reliability of the admission process.

Duplicate Rule Configuration

Property	Value
Object	Contact
Matching Rule	Contact Matching Rule
Action on Create	Alert User
Action on Edit	Alert User
Allow Save	Disabled
Status	Active

Matching Rule Configuration

Property	Value
Object	Contact
Matching Criteria	Student Name, Email, Phone Number
Matching Method	Exact Match
Status	Active

Matching Rule

Unique Student – Email & Phone

Matching Rule Detail

[Delete](#) [Clone](#) [Deactivate](#)

Object	Contact
Rule Name	Unique Student – Email & Phone
Unique Name	Unique_Student_Email_Phone
Description	Ensures each student is uniquely identified using Email and Phone.
Matching Criteria	(Contact: Email EXACT MatchBlank = TRUE) AND (Contact: Phone EXACT MatchBlank = TRUE)
Status	Active
Created By	NADUPURU KUSUMA, 7/2/2026, 5:23 AM
Modified By	NADUPURU KUSUMA, 7/2/2026, 5:36 AM

SETUP

Matching Rules

Matching Rule

Unique Enrollment – Student & Course

Matching Rule Detail

[Delete](#) [Clone](#) [Deactivate](#)

Object	Student Enrollment
Rule Name	Unique Enrollment – Student & Course
Unique Name	Unique_Enrollment_Student_Course
Description	Prevents duplicate student enrollment records for the same student and course.
Matching Criteria	(Student Enrollment: Student EXACT MatchBlank = TRUE) AND (Student Enrollment: Enrollment_Status EXACT MatchBlank = TRUE)
Status	Active
Created By	NADUPURU KUSUMA, 7/2/2026, 5:35 AM
Modified By	NADUPURU KUSUMA, 7/2/2026, 5:35 AM

Implementation Steps

The following activities were completed during this milestone:

1. Opened Salesforce Setup.
2. Navigated to Matching Rules.
3. Created a new Matching Rule for the Contact object.
4. Added the required matching criteria such as Student Name, Email Address, and Phone Number.
5. Saved and activated the Matching Rule.
6. Navigated to Duplicate Rules.
7. Created a new Duplicate Rule for the Contact object.
8. Selected the previously created Matching Rule.
9. Configured the rule to display an alert when duplicate records are detected.
10. Disabled duplicate record creation.
11. Saved and activated the Duplicate Rule.
12. Tested the rule by attempting to create duplicate student records.
13. Verified that Salesforce successfully detected and prevented duplicate entries.

A **Profile** in Salesforce is a collection of permissions and settings assigned to users. It determines what users can view, create, edit, or delete within the organization. Profiles also control access to applications, tabs, Apex classes, Visualforce pages, and object-level permissions.

In this project, separate profiles were configured for **Admission Managers** and **Admission Counselors** to provide role-based access while maintaining data security. The profiles ensure that users can perform only the tasks relevant to their responsibilities.

Profiles Configured

Profile Name	Purpose
System Administrator	Full administrative access to configure and manage the Salesforce organization.
Admission Manager	Manages student admissions, reviews enrollment requests, approves applications, and accesses reports and dashboards.
Admission Counselor	Manages student records, enrollments, and course information with limited administrative permissions.

Profile Permissions

Permission	Admission Manager	Admission Counselor
Contact	Create, Read, Edit	Create, Read, Edit
Opportunity	Create, Read, Edit	Create, Read, Edit
Course	Create, Read, Edit	Read
Student Enrollment	Create, Read, Edit	Create, Read, Edit
Reports	Enabled	Enabled
Dashboards	Enabled	Enabled
Approval Process	Approve Records	View Only
Agentforce AI	Enabled	Enabled

Implementation Steps

The following activities were completed during this milestone:

1. Opened Salesforce Setup.
2. Navigated to Profiles.
3. Reviewed the available standard profiles.
4. Created or configured profiles according to project requirements.
5. Assigned object-level permissions for Contact, Opportunity, Course, and Student Enrollment.
6. Configured field-level security where required.

7. Enabled access to the Student Admission Lightning App.
8. Assigned tab visibility for standard and custom objects.

9. Granted permissions for Reports and Dashboards.
10. Assigned the appropriate profiles to the Admission Manager and Admission Counselor users.
11. Verified user access by logging in with the assigned profiles.

Outcome

Profiles were successfully configured to provide secure and role-based access to the AI-Enabled Student Admissions & Support Management System. The implemented profiles ensure that users can access only the resources required for their responsibilities, improving system security, protecting sensitive data, and supporting efficient management of the student admission process.

Milestone 17: Roles & Role Hierarchy

Objective

The objective of this milestone is to create and configure **Roles** and establish a **Role Hierarchy** in Salesforce for the AI-Enabled Student Admissions & Support Management System. The role hierarchy ensures that users have appropriate record visibility based on their organizational responsibilities while supporting efficient collaboration between admission counselors and managers.

Introduction

A **Role Hierarchy** in Salesforce controls record-level access by allowing users higher in the hierarchy to view, edit, and report on records owned by users below them. It reflects the organizational structure and facilitates secure data sharing without granting unnecessary permissions.

In this project, a role hierarchy was created to represent the admission department. The **Admission Manager** was assigned as the parent role, while the **Admission Counselor** was created as a child role. This hierarchy enables managers to monitor and manage records owned by counselors while maintaining an organized reporting structure.

Roles Created

Role Name	Reports To	Purpose
Admission Manager	CEO (or Top-Level Role)	Oversees the complete admission process, approves student enrollments, and manages admission activities.
Admission Counselor	Admission Manager	Handles student applications, manages enrollments, and reports to the Admission Manager.

Role Hierarchy Structure

The screenshot shows the 'Role Edit' page for the 'Manager' role. At the top, there is a header with a person icon, the word 'SETUP', and 'Roles'. Below this, the page title is 'Role Edit Manager'. The main form area is titled 'Role Edit' and contains the following fields: 'Label' with the value 'Manager', 'Role Name' with the value 'Manager' and an information icon, 'This role reports to' with the value 'CEO' and a search icon, and 'Role Name as displayed on reports' which is empty. At the bottom, there are three buttons: 'Save', 'Save & New', and 'Cancel'.

The screenshot shows the 'Role Edit' page for the 'Counselor' role. At the top, there is a header with a person icon, the word 'SETUP', and 'Roles'. Below this, the page title is 'Role Edit Counselor'. The main form area is titled 'Role Edit' and contains the following fields: 'Label' with the value 'Counselor', 'Role Name' with the value 'Counselor' and an information icon, 'This role reports to' with the value 'Manager' and a search icon, and 'Role Name as displayed on reports' which is empty. At the bottom, there are three buttons: 'Save', 'Save & New', and 'Cancel'.

Implementation Steps

The following activities were completed during this milestone:

1. Opened Salesforce Setup.
2. Navigated to Roles.
3. Opened the Set Up Roles page.
4. Created the Admission Manager role under the top-level organizational role.
5. Entered the Role Label and verified the automatically generated Role Name.
6. Saved the Admission Manager role.
7. Created the Admission Counselor role under the Admission Manager role.
8. Entered the Role Label and verified the Role Name.
9. Saved the Admission Counselor role.
10. Assigned the appropriate roles to the corresponding Salesforce users.
11. Verified that the role hierarchy displayed correctly.
12. Confirmed that the Admission Manager could access records owned by the Admission Counselor.

The screenshot shows the Salesforce Setup interface in Developer Edition. The left sidebar contains a navigation menu with 'Users' expanded, showing 'Roles' as the selected option. The main content area displays the 'Roles' setup page for the 'MVGR COLLEGE OF ENGINEERING' organization. A role hierarchy is visible, starting with 'CEO' at the top, followed by 'CFO', 'COO', 'Admission Manager', 'Manager', 'Counselor', 'SVP Customer Service & Support', 'Customer Support International', 'Customer Support North America', 'Installation & Repair Services', and 'SVP Human Resources'. Each role has an 'Add Role' button and links for 'Edit' and 'Delete'.

Outcome

The Roles and Role Hierarchy were successfully configured in Salesforce for the AI-Enabled Student Admissions & Support Management System. The implemented hierarchy accurately reflects the organizational structure, enabling Admission Managers to supervise and access records managed by Admission Counselors. This configuration improves collaboration, supports secure record sharing, and enhances the efficiency of the student admission process while maintaining proper access control.

The screenshot shows the Salesforce 'My Contacts' page. The page header includes the Salesforce logo, a search bar, and navigation tabs for 'Accounts', 'Contacts', 'Courses', 'Opportunities', and 'Student Enrollments'. The 'Contacts' tab is active. Below the header, there's a summary section showing 'Total Contacts: 2' and various filters. A table lists the contacts, with columns for 'Name', 'Title', 'Account Name', 'Last Activity', and 'Actions'. Two contacts are listed: 'Priya Reddy' and 'Rahul Reddy'. The 'Actions' column for each contact includes icons for email, phone, and a dropdown menu.

The logo for the AI-Enabled Student Admissions & Support system. It features a circular icon on the left with a graduation cap, a book, and a gear, surrounded by the text 'ADMIT & SUPPORT'. To the right of the icon, the text 'AI-Enabled Student Admissions & Sup...' is displayed in a blue font, followed by a blue six-dot menu icon.

7. FUNCTIONAL & PERFORMANCE TESTING

The developed AI-Enabled Student Admissions & Support Management System was tested to verify the functionality of all implemented features. Testing ensured that the system performed according to the project requirements and business logic.

The following functionalities were successfully verified:

- Creation and management of Contact, Opportunity, Course, and Student Enrollment records.
- Validation Rules to ensure accurate data entry.
- Approval Process for high-discount student enrollments.
- Email Templates and Email Alerts for automated notifications.
- Record-Triggered Flows for automating admission-related processes.
- Lightning App navigation and customized Page Layouts.
- Dynamic Forms for improved user experience.
- User, Profile, and Role Hierarchy configuration.
- Duplicate Rules and Matching Rules to prevent duplicate student records.
- Agentforce AI configuration and integration with the Student Enrollment process.

The system demonstrated reliable performance by automating repetitive tasks, reducing manual effort, maintaining data consistency, and providing a centralized platform for managing student admissions.

8. ADVANTAGES & DISADVANTAGES

Advantages

- Centralized management of student admissions and enrollment records.
- Automation of repetitive tasks using Salesforce Flows.
- Improved data accuracy through Validation Rules.
- Prevention of duplicate student records using Duplicate and Matching Rules.
- Automated approval workflow for high-discount enrollments.
- Faster communication through Email Templates and Email Alerts.
- Secure access control using Profiles and Role Hierarchy.
- User-friendly interface through Lightning App and Dynamic Forms.
- AI-powered assistance using Agentforce AI to support admission decision-making.
- Scalable solution capable of supporting future organizational requirements.

Disadvantages

- Initial Salesforce configuration requires adequate administrative knowledge.
- Advanced AI features require proper Agentforce configuration and licensing.
- Customizations may require periodic maintenance as business requirements evolve.
- Dependence on internet connectivity and Salesforce platform availability.
- Some advanced features may require additional Salesforce editions or licenses.

9. CONCLUSION

The **AI-Enabled Student Admissions & Support Management System** was successfully designed and implemented using the Salesforce Platform. The system effectively manages student information, course details, enrollment records, approvals, and automated communications through Salesforce's declarative features.

The project demonstrates the practical application of Salesforce technologies, including Lightning Apps, Custom Objects, Validation Rules, Approval Processes, Flows, Dynamic Forms, Email Automation, Profiles, Roles, and Agentforce AI. These features work together to improve operational efficiency, minimize manual intervention, and ensure secure and accurate management of the admission process.

Overall, the project provides a modern, scalable, and intelligent solution for educational institutions to streamline their student admission workflow while showcasing the capabilities of Salesforce as a low-code CRM platform.

10. FUTURE SCOPE

The project can be further enhanced by incorporating additional Salesforce and AI capabilities, including:

- Integration with external Student Information Systems (SIS).
- Online student application portal using Experience Cloud.
- AI-powered chatbot for admission-related queries.
- Integration with payment gateways for online fee collection.
- Automated document verification using AI services.
- Mobile application integration for students and counselors.
- Advanced dashboards using CRM Analytics (Tableau CRM).
- Multi-campus admission management.
- Integration with Learning Management Systems (LMS).

These enhancements would further improve automation, user experience, and decision-making capabilities.

11. APPENDIX

Source Code

Since the project was developed using Salesforce's declarative (low-code) platform, no traditional programming source code was required. The application was implemented using Salesforce configuration features such as:

- Lightning App
- Custom Objects
- Custom Fields
- Validation Rules
- Approval Processes
- Record-Triggered Flows
- Email Templates
- Email Alerts
- Dynamic Forms
- Profiles
- Roles & Role Hierarchy
- Duplicate & Matching Rules
- Agentforce AI Configuration

Dataset

The project utilizes sample educational data, including:

- Student Records
- Course Information
- Student Enrollment Records
- Admission Details
- Payment Information
- Approval Status Records

Tools Used

- Salesforce Developer Org
- Salesforce Lightning Experience
- Salesforce Flow Builder
- Salesforce Object Manager
- Approval Process
- Agentforce AI
- Prompt Builder
- Email Templates & Email Alerts
- Reports & Dashboards
- Google Chrome
- Microsoft Word (Documentation)

ACKNOWLEDGEMENT

I sincerely express my gratitude to **SmartBridge**, **Salesforce**, and my mentors for providing the opportunity to work on this internship project. The guidance, learning resources, and hands-on experience gained throughout the internship have significantly enhanced my understanding of Salesforce administration, declarative development, automation, and AI-powered CRM solutions.

This project has strengthened my practical knowledge of Salesforce and provided valuable industry exposure that will support my future professional growth.

THANK YOU

AI-Enabled Student Admissions & Support Management System
